Safety Instructions

■ Before You Begin

Before handling the product, read the instructions and safety guidelines on the following pages to prevent damage to the product and to ensure your own personal safety. Refer to the “Advisories” section in the Preface for advisory conventions used in this user’s guide, including the distinction between Warnings, Cautions, Important Notes, and Notes.

- Always use caution when handling/operating a computer. Only qualified, experienced, authorized electronics service personnel should access the interior of a computer. The power supplies produce high voltages and energy hazards, which can cause bodily harm.
- Use extreme caution when installing or removing components. Refer to the installation instructions in this user’s guide for precautions and procedures. If you have any questions, please contact Quanmax Post-Sales Technical Support.

WARNING

High voltages are present inside the chassis when the unit’s power cord is plugged into an electrical outlet. Turn off system power, turn off the power supply, and then disconnect the power cord from its source before removing the chassis cover. Turning off the system power switch does not remove power to components.

■ When Working Inside a Computer

Before taking covers off a computer, perform the following steps:

1. Turn off the computer and any peripherals.
2. Disconnect the computer and peripherals from their power sources or subsystems to prevent electric shock or system board damage. This does not apply when hot swapping parts.

3. Follow the guidelines provided in “Preventing Electrostatic Discharge” on the following page.
4. Disconnect any telephone or telecommunications lines from the computer.

In addition, take note of these safety guidelines when appropriate:

- To help avoid possible damage to system boards, wait five seconds after turning off the computer before removing a component, removing a system board, or disconnecting a peripheral device from the computer.
- When you disconnect a cable, pull on its connector or on its strain-relief loop, not on the cable itself. Some cables have a connector with locking tabs. If you are disconnecting this type of cable, press in on the locking tabs before disconnecting the cable. As you pull connectors apart, keep them evenly aligned to avoid bending any connector pins. Also, before connecting a cable, make sure both connectors are correctly oriented and aligned.

CAUTION

Do not attempt to service the system yourself except as explained in this user's guide. Follow installation and troubleshooting instructions closely.

■ Preventing Electrostatic Discharge

Static electricity can harm system boards. Perform service at an ESD workstation and follow proper ESD procedure to reduce the risk of damage to components. Quanmax strongly encourages you to follow proper ESD procedure, which can include wrist straps and smocks, when servicing equipment. You can also take the following steps to prevent damage from electrostatic discharge (ESD):

- When unpacking a static-sensitive component from its shipping carton, do not remove the component's antistatic packing material until you are ready to install the component in a computer. Just before unwrapping the antistatic packaging, be sure you are at an ESD workstation or grounded. This will discharge any static electricity that may have built up in your body.

Safety Instructions

- When transporting a sensitive component, first place it in an antistatic container or packaging.
- Handle all sensitive components at an ESD workstation. If possible, use antistatic floor pads and workbench pads.
- Handle components and boards with care. Don't touch the components or contacts on a board. Hold a board by its edges or by its metal mounting bracket.
- Do not handle or store system boards near strong electrostatic, electromagnetic, magnetic, or radioactive fields.

Preface

■ How to Use This Guide

This guide is designed to be used as step-by-step instructions for installation, and as a reference for operation, troubleshooting, and upgrades.

NOTE

Driver downloads and additional information are available under Downloads on our web site: www.quanmax.com.

■ Unpacking

When unpacking, follow these steps:

1. After opening the box, save it and the packing material for possible future shipment.
2. Remove all items from the box. If any items listed on the purchase order are missing, notify Quanmax customer service immediately.
3. Inspect the product for damage. If there is damage, notify Quanmax customer service immediately. Refer to “Warranty Policy” for the return procedure.

■ Regulatory Compliance Statements

This section provides the FCC compliance statement for Class A devices.

FCC Compliance Statement for Class A Devices

The product(s) described in this user's guide has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the user's guide, may cause harmful interference to radio communications. Operation of this equipment in a residential

area (domestic environment) is likely to cause harmful interference, in which case the user will be required to correct the interference (take adequate measures) at their own expense.

Changes or modifications not expressly approved by Quanmax could void the user's authority to operate the equipment.

NOTE

The assembler of a personal computer system may be required to test the system and/or make necessary modifications if a system is found to cause harmful interference or to be noncompliant with the appropriate standards for its intended use.

■ Warranty Policy

Limited Warranty

Quanmax Inc.'s detailed Limited Warranty policy can be found under Support at www.quanmax.com. Please consult your distributor for warranty verification.

The limited warranty is void if the product has been subjected to alteration, neglect, misuse, or abuse; if any repairs have been attempted by anyone other than Quanmax or its authorized agent; or if the failure is caused by accident, acts of God, or other causes beyond the control of Quanmax or the manufacturer. Neglect, misuse, and abuse shall include any installation, operation, or maintenance of the product other than in accordance with the user's guide.

No agent, dealer, distributor, service company, or other party is authorized to change, modify, or extend the terms of this Limited Warranty in any manner whatsoever.

Quanmax reserves the right to make changes or improvements in any product without incurring any obligation to similarly alter products previously purchased.

Return Procedure

For any Limited Warranty return, please contact Support at www.quanmax.com and login to obtain a Return Material Authorization (RMA) Number. If you do not have an account, send an email to support@quanmax.com to apply for one.

All product(s) returned to Quanmax for service or credit must be accompanied by a Return Material Authorization (RMA) Number. Freight on all returned items must be prepaid by the customer who is responsible for any loss or damage caused by common carrier in transit. Returns for Warranty must include a Failure Report for each unit, by serial number(s), as well as a copy of the original invoice showing the

date of purchase.

To reduce risk of damage, returns of product must be in a Quanmax shipping container. If the original container has been lost or damaged, new shipping containers may be obtained from Quanmax Customer Service at a nominal cost. Quanmax owns all parts removed from repaired products. Quanmax uses new and reconditioned parts made by various manufacturers in performing warranty repairs and building replacement products. If Quanmax repairs or replaces a product, its warranty term is not extended.

Shipments not in compliance with this Limited Warranty Return Policy will not be accepted by Quanmax.

Limitation of Liability

In no event shall Quanmax be liable for any defect in hardware, software, loss, or inadequacy of data of any kind, or for any direct, indirect, incidental, or consequential damages in connection with or arising out of the performance or use of any product furnished hereunder. Quanmax's liability shall in no event exceed the purchase price of the product purchased hereunder. The foregoing limitation of liability shall be equally applicable to any service provided by Quanmax or its authorized agent.

■ Maintaining Your Computer

Environmental Factors

■ Temperature

The ambient temperature within an enclosure may be greater than room ambient temperature. Installation in an enclosure should be such that the amount of air flow required for safe operation is not compromised.

Consideration should be given to the maximum rated ambient temperature.

Overheating can cause a variety of problems, including premature aging and failure of chips or mechanical failure of devices.

If the system has been exposed to abnormally cold temperatures, allow a two-hour warm-up period to bring it up to normal operating temperature before turning it on. Failure to do so may cause damage to internal components, particularly the hard disk drive.

■ Humidity

High-humidity can cause moisture to enter and accumulate in the system. This moisture can cause corrosion of internal components and degrade such

properties as electrical resistance and thermal conductivity. Extreme moisture buildup inside the system can result in electrical shorts, which can cause serious damage to the system.

Buildings in which climate is controlled usually maintain an acceptable level of humidity for system equipment. However, if a system is located in an unusually humid location, a dehumidifier can be used to maintain the humidity within an acceptable range. Refer to the “Specifications” section of this user’s guide for the operating and storage humidity specifications.

■ **Altitude**

Operating a system at a high altitude (low pressure) reduces the efficiency of the cooling fans to cool the system. This can cause electrical problems related to arcing and corona effects. This condition can also cause sealed components with internal pressure, such as electrolytic capacitors, to fail or perform at reduced efficiency.

Power Protection

The greatest threats to a system’s supply of power are power loss, power spikes, and power surges caused by electrical storms, which interrupt system operation and/or damage system components. To protect your system, always properly ground power cables and one of the following devices.

■ **Surge Protector**

Surge protectors are available in a variety of types and usually provide a level of protection proportional with the cost of the device. Surge protectors prevent voltage spikes from entering a system through the AC power cord. Surge protectors, however, do not offer protection against brownouts, which occur when the voltage drops more than 20 percent below the normal AC line voltage level.

■ **Line Conditioner**

Line conditioners go beyond the over voltage protection of surge protectors. Line conditioners keep a system’s AC power source voltage at a fairly constant level and, therefore, can handle brownouts. Because of this added protection, line conditioners cost more than surge protectors. However, line conditioners cannot protect against a complete loss of power.

■ **Uninterruptible Power Supply**

Uninterruptible power supply (UPS) systems offer the most complete protection against variations on power because they use battery power to keep the server running when AC power is lost. The battery is charged by the AC power while it is available, so when AC power is lost, the battery can provide power to the system for a limited amount of time, depending on the UPS system.

UPS systems range in price from a few hundred dollars to several thousand dollars, with the more expensive units allowing you to run larger systems for a longer period of time when AC power is lost. UPS systems that provide only 5 minutes of battery power let you conduct an orderly shutdown of the system, but are not intended to provide continued operation. Surge protectors should be used with all UPS systems, and the UPS system should be Underwriters Laboratories (UL) safety approved.

Chapter 1

Introduction

■ Overview

The KEEX-6100 is an ECX Form Factor embedded single board computer (SBC) that equips the latest 2nd generation Intel® Core™ i3/i5/i7 processors with the high integration of the Intel® QM67/ HM65 chipset. Featured are DDR3 1066/1333 SO-DIMM up to 8GB, 2x 24-bit LVDS, HDMI, DP, VGA, 2x Gigabit Ethernet, 2x SATA, mini PCIe slot, 8x USB 2.0, 2x COM ports with Power Selection, HD audio and CompactFlash.

Checklist

- Driver/ Manual CD
- Quick Installation Guide
- SATA Cable
- KEEX-6100 main board

Features

- 2nd Generation Intel® Core™ i3/i5/i7 Processors
- Intel® QM67 / HM65 Express Chipset
- 1x DDR3 SO-DIMM Socket
- 2x LVDS, HDMI, VGA, DP supported
- 1x mini PCIe
- 2x GbE
- 2x COM ports, 8x USB 2.0
- 2x 7-pin SATA connectors supported
- 1x CompactFlash socket onboard
- Watchdog Timer, Hardware Monitor

■ Product Specifications

Model Name	▪ KEEEX-6100																												
Form Factor	▪ ECX (146mm x 105mm)																												
Processor	▪ 2 nd Generation Intel core i3/i5/i7 Processors with rPGA988B package																												
Memory	▪ 1x SO-DIMM, dual channel DDR3, non-ECC supported, up to 8GB																												
Chipset	▪ KEEEX-6100---Intel [®] QM67 Express Chipset ▪ KEEEX-6101---Intel [®] HM65 Express Chipset																												
Graphics	▪ Intel HD Graphics 3000 rocessor graphics <ul style="list-style-type: none">• 1x VGA with DB-15 female connector• 1x HDMI connector• 1x DP Connector• 2x 1x 30-pin SPWG connectors for 2x dual channel 24-bit LVDS• 2x 1x 7-pin pitch 1.25 mm wafer connector for LVDS1 and LVDS2 backlight control																												
Ethernet	▪ 2x Ethernet ports supported <ul style="list-style-type: none">• 1x Intel 82579LM Gb/s Ethernet PHY onboard as LAN1• 1x Realtek RTL8111C Gb/s Ethernet controller onboard as LAN2• 2x RJ-45 w/z Gb/s transformer connector on rear I/O• LAN1 with iAMT supported• Both LAN1 & LAN2 with WOL/PXE supported																												
Audio	▪ Realtek ALC662-VC HD codec onboard <ul style="list-style-type: none">• 1x 2W audio amplifier onboard• 1x 2x 6-pins pitch 2.54mm header for Line-Out, Line-In and Mic-In; Pin definition is as shown below:<table><tr><td>Pin Description</td><td>Pin #</td><td>Pin #</td><td>Pin Description</td></tr><tr><td>Mic-In_L</td><td>1</td><td>2</td><td>Mic-In_R</td></tr><tr><td>Mic-In Jack Detect</td><td>3</td><td>4</td><td>Audio_GND</td></tr><tr><td>Line-In 1_L</td><td>5</td><td>6</td><td>Line-In 1_R</td></tr><tr><td>Line-In Jack 1 Detect</td><td>7</td><td>8</td><td>Audio_GND</td></tr><tr><td>Line-Out_L</td><td>9</td><td>10</td><td>Line-Out_R</td></tr><tr><td>Line-Out Jack Detect</td><td>11</td><td>12</td><td>Audio_GND</td></tr></table>• 2x 2-pins pitch 2.0 mm wafer connector for Right/Left speaker out• 1x 1x 4-pin pitch 2.54 mm header for S/PDIF	Pin Description	Pin #	Pin #	Pin Description	Mic-In_L	1	2	Mic-In_R	Mic-In Jack Detect	3	4	Audio_GND	Line-In 1_L	5	6	Line-In 1_R	Line-In Jack 1 Detect	7	8	Audio_GND	Line-Out_L	9	10	Line-Out_R	Line-Out Jack Detect	11	12	Audio_GND

Figure 2 Mechanical Dimensions

Chapter 2

Hardware Settings

■ Overview

This chapter provides the definitions and locations of jumpers, headers, and connectors.

Jumpers

The product has several jumpers which must be properly configured to ensure correct operation.

Figure 3 Jumper Connector

For a three-pin jumper (see *Figure 3*), the jumper setting is designated “1-2” when the jumper connects pins 1 and 2. The jumper setting is designated “2-3” when pins 2 and 3 are connected and so on. You will see that one of the lines surrounding a jumper pin is thick, which indicates pin No.1.

To move a jumper from one position to another, use needle-nose pliers or tweezers to pull the pin cap off the pins and move it to the desired position.

■ Jumper Settings and Pin Definitions

For jumper and connector locations, please refer to the diagrams below.

Figure 4 Jumper and Connector Locations

Jumper Settings

To ensure correct system configuration, the following section describes how to set the jumpers to enable/disable or change functions. For jumper descriptions, please refer to the table below.

Chapter 3

System Installation

■ Expansion Interfaces

- 1x full size mini-PCIe slot supported
- 1x connector onboard for SIM card signals supported

NOTE

When adding or removing expansion cards, make sure that you unplug the power supply first. Meanwhile, read the documentation for the expansion card to configure any necessary hardware or software settings for the expansion card, such as jumpers, switches or BIOS configuration.

■ Memory Module Installation

Carefully follow the steps below in order to install the DIMMs:

1. To avoid generating static electricity and damaging the SO-DIMM, ground yourself by touching a grounded metal surface or use a ground strap before you touch the SO-DIMM.
2. Do not touch the connectors of the SO-DIMM. Dirt or other residue may cause a malfunction.
3. Hold the SO-DIMM with its notch aligned with the memory socket of the board and insert it at a 30-degree angle into the socket.

Figure 6 Align the SO-DIMM Memory Module with the onboard socket

4. Fully insert the module into the socket until a “click” is heard.
5. Press down on the SO-DIMM so that the tabs of the socket lock on both sides of the module

Figure 7 Press down on the SO-DIMM Memory Module to lock it in place

Removing a DIMM:

To remove the SO-DIMM, use your fingers or a small screwdriver to carefully push away the tabs that secure either side of the SO-DIMM. Lift it out of the socket. Make sure you store the SO-DIMM in an anti-static bag. The socket must be populated with memory modules of the same size and manufacturer.

Chapter 4

AMI BIOS Setup

■ Overview

This chapter provides a description of the AMI BIOS. The BIOS setup menus and available selections may vary from those of your product. For specific information on the BIOS for your product, please contact Quanmax.

NOTE: The BIOS menus and selections for your product may vary from those in this chapter. For the BIOS manual specific to your product, please contact Quanmax

AMI's ROM BIOS provides a built-in Setup program, which allows the user to modify the basic system configuration and hardware parameters. The modified data will be stored in a battery-backed CMOS, so that data will be retained even when the power is turned off. In general, the information saved in the CMOS RAM will not need to be changed unless there is a configuration change in the system, such as a hard drive replacement or when a device is added.

It is possible for the CMOS battery to fail, which will cause data loss in the CMOS only. If this happens you will need to reconfigure your BIOS settings.

■ Main Menu

The BIOS Setup is accessed by pressing the DEL key after the Power-On Self-Test (POST) memory test begins and before the operating system boot begins. Once you enter the BIOS Setup Utility, the Main Menu will appear on the screen. The Main Menu provides System Overview information and allows you to set the System Time and Date. Use the “<” and “>” cursor keys to navigate between menu screens.

Save Changes and Exit

Exit system setup after saving the changes. Once you are finished making your selections, choose this option from the Exit menu to ensure the values you selected are saved to the CMOS RAM. The CMOS RAM is sustained by an onboard backup battery and stays on even when the PC is turned off. When you select this option, a confirmation window appears. Select [Yes] to save changes and exit.

Discard Changes and Exit

Exit system setup without saving any changes. Select this option only if you do not want to save the changes that you made to the Setup program. If you made changes to fields other than system date, system time, and password, the BIOS asks for a confirmation before exiting.

Discard Changes

Discards changes done so far to any of the setup values. This option allows you to discard the selections you made and restore the previously saved values. After selecting this option, a confirmation appears. Select [Yes] to discard any changes and load the previously saved values.

Load Optimal Defaults

Load Optimal Default values for all the setup values. This option allows you to load optimal default values for each of the parameters on the Setup menus, which will provide the best performance settings for your system. The F9 key can be used for this operation.

Load Failsafe Defaults

Load Optimal Default values for all the setup values. This option allows you to load failsafe default values for each of the parameters on the Setup menus, which will provide the most stable performance settings. The F8 key can be used for this operation.

Chapter 5

Driver Installation

If your KEMX-6000 does not come with an operating system pre-installed, you will need to install an operating system and the necessary drivers to operate it. After you have finished assembling your system and connected the appropriate power source, power it up using the power supply and install the desired operating system. You can download the drivers for the KEEX-6100 from the Quanmax website at www.quanmax.com and install as instructed there. For other operating systems, please contact Quanmax.

NOTE

When the system reboots without connecting the CRT, there might be no image on screen when you insert the CRT/VGA cable. Please pressing **<Ctrl>+<Alt>+<F1>** simultaneously to show the image on screen.

Appendix A

DIO (Digital I/O) Sample Code

```

//*****
//KEEX-6100 DOS DIO sample program
//Please compile with Turbo C 3.0 to utilized the program
//0:Low 1:High
//DI_1: IOport 0x50C bit2   DO_1: IOport 0x539 bit4
//DI_2: IOport 0x50C bit3   DO_2: IOport 0x539 bit5
//DI_3: IOport 0x50C bit4   DO_3: IOport 0x539 bit6
//DI_4: IOport 0x50C bit5   DO_4: IOport 0x53B bit0
//*****

int main()
{
    int RetVal;

    //Clear DO_1~4
    RetVal=inp(0x539);//IO Port: 0x539
    RetVal=(RetVal&0x8F);//DO_1 is bit 4
                    //DO_2 is bit 5
                    //DO_3 is bit 6
    outp(0x539,RetVal);

    RetVal=inp(0x53B);//IO Port: 0x53B
    RetVal=(RetVal&0xFE);//DO_4 is bit 0
    outp(0x53B,RetVal);

    system("pause");

    //Setting DO_1~4
    RetVal=inp(0x539);//IO Port: 0x539
    RetVal=(RetVal|0x70);//DO_1 is bit 4

```

```
        //DO_2 is bit 5
        //DO_3 is bit 6
    outp(0x539,RetVal);

    RetVal=inp(0x53B);//IO Port: 0x53B
    RetVal=(RetVal|0x01);//DO_4 is bit 0
    outp(0x53B,RetVal);

    system("pause");

    //Reading DI_1~4
    RetVal=inp(0x50C);//IO Port: 0x50C

        //DI_2 is bit 3
        //DI_3 is bit 4
        //DI_4 is bit 5
    printf("DI_ = %d\n",RetVal);
    system("pause");

    return 0;
}
```

Appendix B

WatchDog Timer Sample Code

```
//=====
//KEEX-6100 DOS Watchdog sample program
//Please compile with Turbo C 3.0 to utilized the program
//=====

#include<stdio.h>
int main()
{
    int value;
    //Initialized the WDT program
    outp(0x2E,0x87);
    outp(0x2E,0x87);

    //Setting Logical Device Number to 0x07
    outp(0x2E,0x07);
    outp(0x2F,0x07);

    //0xF5 bit6
    //If watchdog timeout event occurs, this bit will be set to 1.
    //Write a 1 to this bit will clear it to 0.
    outp(0x2F,0xF5);
    value=inp(0x2F);
    outp(0x2F,(value | 0x40));

    //Set Timer unit
    //(0xF5 bit3(0: 1sec, 1: 60 sec) of watchdog timer by setting this bit)
    outp(0x2E,0xF5);
    value=inp(0x2F);
    outp(0x2F,(value & 0xF7));//set unit sec.

    //Set Timer Value(0xF6 Time of watchdog timer)
    outp(0x2E,0xF6);
    outp(0x2F,0x14);//set to 20 sec (0x14)

    //Enable WDT
    outp(0x2E,0xF5);
    value=inp(0x2F);
    outp(0x2F,(value | 0x30));//
```

```
    outp(0x2E,0xF0);  
    outp(0x2F,0x81);//bit7 WDTRST# output is enabled  
  
    return 0;  
}
```
